

Assembly

Output

- Electronics are added to coils or coil configurations, e.g. for motors (stator)
- Coils are mounted in/on carriers
- Electronics are assembled with electromechanical components into devices
- Coils and electronics as wired and assembled unit

Input

- Semi-finished KUK goods (coils, electronics)
- Purchased parts (mechanical, electronic)
- Defined processes
- Test instructions

Know-how

- Process reliability, retraceability
- Accurate assembly
- Testing
- Logistics

Capacity

- 10 fully equipped assembly places

Examples

- Stators of linear motors
- Magnet bearing unit
- Charging devices for lithium batteries
- Lighting units with Power LED

Packaging

- Product-specific

Values specified are typical, but not binding.
